Professional Summary

Full-stack software engineer with **2+ years** of experience shipping production APIs, React UIs and cloud-native services for an enterprise contact-center platform. Works in **TypeScript/Node.js** and Go on Kubernetes, with a focus on secure **API design**, automated testing (Playwright, CI quality gates) and production reliability. Builds and uses **AI agent workflows** (Cursor, Claude Code, Codex) and validates generated output through tests, review, and security checks.

Experience

Software Engineer I July 2024 – Present

Avaya *Pune, India*

- Implemented `triggerWorkflow()` across the Element API SDK and agent UI so embedded components start workflows through a trusted host via `postMessage`, **without exposing credentials to the embedded component**; wrote tests for the message-validation path.
- Built a **contract-first (OpenAPI)** workflow **internal-API catalog** in TypeScript, Node.js, Express, Prisma, and MySQL, with request validation and list/by-ID endpoints.
- Delivered **React** configuration features, including an Admin About page for service versions and agentless-campaign settings with **authorization/permissions logic**, plus the matching Node.js service change.
- Configured global API rate limiting using **Envoy/Istio** to protect backend services from overload, including a **6,000 requests/min** transcript limit, HTTP 429 responses, and RateLimit headers.
- Developed **agentless email and SMS proofs of concept** using workflow/API integrations and **Twilio**; documented setup and validation in a test runbook.
- Improved **Go notification-service reliability on Azure AKS** with liveness/readiness probes, dependency-aware checks, zone topology spread, and a PodDisruptionBudget.
- Added **three merge-blocking CI/CD** quality and security gates (SonarQube, Go coverage, and Wiz) with an **86.6%** line-coverage baseline.
- Built a **Playwright** end-to-end suite covering **edge cases** such as timer lifecycle, exactly-once auto-dial, and duplicate or out-of-order events.
- Built reusable **AI-agent skills** (Codex/Cursor) that map test cases from specs to **Zephyr** through spec, spreadsheet and publish steps, with a human review gate before each publish so output is verified, not blindly applied.

Software Development Intern Jan 2024 – June 2024

Avaya *Pune, India*

- Built a **Kafka/Avro** event-streaming path with REST ingestion (Java, Spring Boot) and **Python/Ansible** automation to upgrade Avaya Aura components on remote hosts.
- Prototyped a **neural-network model** to rank agents for incoming customer queries.

Projects

Lets Chat | *React, Node.js, Express, MongoDB, Socket.io, Chakra UI*

- Full-stack **MERN** chat app with **Socket.io** one-to-one and group messaging, MongoDB-backed users, conversations, and messages, and user search.

Technical Skills

Languages & Frameworks: TypeScript, JavaScript, Go, Python, SQL, React
Backend & Distributed Systems: Node.js, Express, REST APIs, OpenAPI, Prisma, Kafka, Redis
Databases & Cloud: MySQL, MongoDB, Azure AKS
DevOps: Docker, Kubernetes, Helm, Istio, Grafana, Argo CD, GitHub Actions, CI/CD, Linux, SonarQube, Wiz, Statsig
Testing: Playwright, Vitest, unit and integration testing
AI-Assisted Development: Cursor, Claude Code, Codex; agent skills and prompt templating, context engineering
CS Fundamentals: Object-Oriented Design, Data Structures and Algorithms, Operating Systems, Computer Networks

Education

B.E. Computer Engineering 2020 – 2024

PICT, Pune *CGPA: 9.59/10*

Achievements

- **CodeChef 3-star** (max rating 1687); solved **500+** problems across CodeChef, Codeforces, LeetCode, HackerRank and GeeksforGeeks.
